Aspiring Software Engineer | Python, SQL | Computer Science Fundamentals

ABOUT

Aspiring Software Engineer and final-year B.Tech Computer Science student with a strong foundation in programming, databases, and software development principles. Proficient in Python and SQL, with hands-on experience in building projects involving data processing and problem-solving. Familiar with core concepts such as DBMS, SDLC, and basic system design, and capable of writing clean, efficient, and maintainable code. Eager to apply technical skills in real-world applications and grow as a software engineer in a collaborative environment.

SKILLS

Programming: Python, SQL, C

Data & Analytics: Excel, Tableau, Power BI

Machine Learning: Data Preprocessing, Exploratory Data Analysis (EDA), Basic Model Understanding

Tools & Platforms: Git, Cloud Platforms

Core Concepts: DBMS, SDLC, Data Cleaning, Analytical Problem-Solving

Soft Skills: Communication, Team Collaboration, Client Interaction, Presentation

PROJECTS

Market Analysis Dashboard

Tech: Python, Streamlit, Financial APIs, LLM (Groq), Data Visualization

- Built a real-time market analysis dashboard tracking stock data with live price updates and technical indicators.
- Implemented AI-powered analysis using LLMs to generate trend insights, risk evaluation, and short-term predictions

Brain Tumor Segmentation using Attention U-Net

Tech: TensorFlow, Keras, OpenCV, Nibabel, Scikit-learn

- Built an Attention U-Net model on BraTS 2020 MRI dataset to segment tumor regions from multi-modal scans, achieving ~98.5% test accuracy
- Performed end-to-end pipeline including preprocessing (NIfTI handling, resizing), model training, and evaluation using IoU, Dice score, and F1 metrics

AI Code Analyzer & Review Tool

Tech: Python (Flask), HTML, CSS, JavaScript, Gemini API

- Developed a full-stack AI-powered code review system to analyze and interpret source code across multiple languages
- Built REST APIs for code analysis, model selection, and health monitoring

EXPERIENCE

Data Analyst Intern (Project-Based) NGO Collaboration

- Cleaned and structured raw survey data collected from field volunteers using SQL, improving data quality and consistency
- Identified trends and key insights by analyzing survey responses across multiple categories
- Developed Excel-based reports and visualizations (charts, pivot tables) to support data-driven decision-making

Volunteer — KIIT International Student Society (ISS)

Bhubaneswar, India | 2023 – Present

- Coordinated with diverse student groups to organize and promote events
- Communicated processes clearly, improving participation and engagement
- Developed strong interpersonal and teamwork skills in dynamic environments

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering

Kalinga Institute of Industrial Technology (KIIT) University, Oct 2022 – Present

CGPA: 7.54

Relevant Coursework: Database Management Systems, Software Development Life Cycle, Data Analytics

AWARDS & CERTIFICATES

- Secured full-tuition Study in India Scholarship (Top 5% of 10,000+ applicants)
- Full Stack Web Development — DevTown (*Apr 2025*)
- Cybersecurity Analyst Job Simulation — TATA Forage (*Jan 2025*)

EXTRA-CURRICULAR ACTIVITIES

- Organized and coordinated cultural programs and fests for the KIIT International Student Society.
- Actively volunteered in social initiatives including plantation drives, contributing to environmental awareness.
